## 📋 TABLES

1. **wards** - Administrative Ward Boundaries

```sql
CREATE TABLE public.wards (
    code VARCHAR(10) PRIMARY KEY,                    -- e.g., 'W01', 'W02'
    name VARCHAR(100) NOT NULL,                      -- Ward name
    total_population INTEGER NOT NULL,               -- Total population
    target_daily_reports INTEGER NOT NULL DEFAULT 5, -- Daily report target
    geom GEOMETRY(MultiPolygon, 4326),               -- Ward boundary geometry
    boundary_geojson JSONB,                          -- Original GeoJSON data
    created_at TIMESTAMP WITH TIME ZONE DEFAULT CURRENT_TIMESTAMP,
    updated_at TIMESTAMP WITH TIME ZONE DEFAULT CURRENT_TIMESTAMP
);

COMMENT ON TABLE public.wards IS 'Master list of administrative wards with
boundaries';
COMMENT ON COLUMN public.wards.geom IS 'Ward boundary in EPSG:4326 (WGS84)';
COMMENT ON COLUMN public.wards.target_daily_reports IS 'Daily reporting target
for ASHA workers';
```

2. **users** - System Users (ASHA Workers & Admins)

```sql
CREATE TABLE public.users (
    id SERIAL PRIMARY KEY,
    username VARCHAR(50) UNIQUE NOT NULL,
    password_hash VARCHAR(255) NOT NULL,
    role VARCHAR(20) NOT NULL CHECK (role IN ('ASHA', 'ADMIN', 'SUPERVISOR')),
    ward_code VARCHAR(10) REFERENCES public.wards(code) ON DELETE SET NULL,
    full_name VARCHAR(100) NOT NULL,
    last_sync_time TIMESTAMP WITHOUT TIME ZONE,
    reports_submitted_total INTEGER DEFAULT 0,
    created_at TIMESTAMP WITH TIME ZONE DEFAULT CURRENT_TIMESTAMP,
    updated_at TIMESTAMP WITH TIME ZONE DEFAULT CURRENT_TIMESTAMP
);

COMMENT ON TABLE public.users IS 'System users including ASHA workers and
administrators';
CREATE INDEX idx_users_role ON public.users (role);
CREATE INDEX idx_users_ward_code ON public.users (ward_code);
```

3. **asha_reports** - Field Reports from ASHA Workers

```sql
CREATE TABLE public.asha_reports (
    id SERIAL PRIMARY KEY,
```

```
    worker_id INTEGER NOT NULL REFERENCES public.users(id) ON DELETE CASCADE,
    ward_code VARCHAR(10) NOT NULL REFERENCES public.wards(code) ON DELETE
CASCADE,
    report_date DATE NOT NULL,
    fever_count INTEGER DEFAULT 0,
    cough_count INTEGER DEFAULT 0,
    diarrhea_count INTEGER DEFAULT 0,
    jaundice_count INTEGER DEFAULT 0,
    rash_count INTEGER DEFAULT 0,
    maternal_risk_flags JSONB,
    child_risk_flags JSONB,
    environmental_flags JSONB,
    location_lat NUMERIC(10,8),
    location_lng NUMERIC(11,8),
    photo_paths JSONB DEFAULT '[]'::JSONB,
    disease_type VARCHAR(50) DEFAULT 'General Fever',
    reporting_form CHAR(1) DEFAULT 'S',              -- 'S': Single, 'P':
Partial, 'L': Large
    created_at TIMESTAMP WITHOUT TIME ZONE DEFAULT NOW(),
    updated_at TIMESTAMP WITHOUT TIME ZONE DEFAULT NOW()
);

COMMENT ON TABLE public.asha_reports IS 'Daily field reports submitted by ASHA
workers';
CREATE INDEX idx_asha_reports_ward_date ON public.asha_reports (ward_code,
report_date);
CREATE INDEX idx_asha_reports_worker_date ON public.asha_reports (worker_id,
report_date);
CREATE INDEX idx_asha_reports_location ON public.asha_reports (location_lat,
location_lng) WHERE location_lat IS NOT NULL;
CREATE INDEX idx_asha_reports_disease_type ON public.asha_reports
(disease_type);
CREATE INDEX idx_asha_reports_reporting_form ON public.asha_reports
(reporting_form);
```

4. **disease_resource_mapping** - Disease to Resource Mapping

```
CREATE TABLE public.disease_resource_mapping (
    disease VARCHAR(50) PRIMARY KEY,
    resource_type VARCHAR(50) NOT NULL
);

COMMENT ON TABLE public.disease_resource_mapping IS 'Maps diseases to required
medical resources';
```

5. **facilities** - Healthcare Facilities

```sql
CREATE TABLE public.facilities (
    id SERIAL PRIMARY KEY,
    name VARCHAR(200) NOT NULL,
    ward_code VARCHAR(10) NOT NULL REFERENCES public.wards(code) ON DELETE
CASCADE,
    location_lat NUMERIC(10,8),
    location_lng NUMERIC(11,8),
    contact VARCHAR(50),
    type VARCHAR(20) DEFAULT 'GOVERNMENT',
    oxygen_status VARCHAR(20) DEFAULT 'STABLE',
    facility_type VARCHAR(50) DEFAULT 'PHC',
    address TEXT,
    specialties JSONB DEFAULT '["General Medicine"]'::JSONB,
    created_at TIMESTAMP WITH TIME ZONE DEFAULT CURRENT_TIMESTAMP,
    updated_at TIMESTAMP WITH TIME ZONE DEFAULT CURRENT_TIMESTAMP
);

COMMENT ON TABLE public.facilities IS 'Healthcare facilities across all wards';
CREATE INDEX idx_facilities_ward_code ON public.facilities (ward_code);
```

6. **capacity_reports** - Facility Capacity Reports

```sql
CREATE TABLE public.capacity_reports (
    id SERIAL PRIMARY KEY,
    facility_id INTEGER NOT NULL REFERENCES public.facilities(id) ON DELETE
CASCADE,
    report_date DATE NOT NULL,
    beds_total INTEGER,
    beds_available INTEGER,
    icu_total INTEGER,
    icu_available INTEGER,
    ventilators_total INTEGER,
    ventilators_available INTEGER,
    oxygen_available BOOLEAN,
    disease_counts JSONB,
    created_at TIMESTAMP WITHOUT TIME ZONE DEFAULT NOW()
);

COMMENT ON TABLE public.capacity_reports IS 'Daily capacity reports from
healthcare facilities';
CREATE INDEX idx_capacity_reports_facility_date ON public.capacity_reports
(facility_id, report_date);
```

7. **facility_inventory** - Medical Supplies Inventory

```sql
CREATE TABLE public.facility_inventory (
    id SERIAL PRIMARY KEY,
```

```
    facility_id INTEGER NOT NULL REFERENCES public.facilities(id) ON DELETE
CASCADE,
    resource_type VARCHAR(50) NOT NULL,
    current_stock INTEGER DEFAULT 0,
    min_threshold INTEGER DEFAULT 100,
    last_updated TIMESTAMP WITHOUT TIME ZONE DEFAULT NOW()
);

COMMENT ON TABLE public.facility_inventory IS 'Current inventory levels at
healthcare facilities';
CREATE INDEX idx_facility_inventory_facility ON public.facility_inventory
(facility_id);
CREATE INDEX idx_facility_inventory_resource ON public.facility_inventory
(resource_type);
```

8. **alerts** - System Alerts

```
CREATE TABLE public.alerts (
    id SERIAL PRIMARY KEY,
    type VARCHAR(50) NOT NULL,
    severity VARCHAR(20) NOT NULL,
    ward_code VARCHAR(10) REFERENCES public.wards(code) ON DELETE SET NULL,
    title VARCHAR(200) NOT NULL,
    description TEXT,
    generated_at TIMESTAMP WITHOUT TIME ZONE DEFAULT NOW(),
    acknowledged_at TIMESTAMP WITHOUT TIME ZONE,
    resolved_at TIMESTAMP WITHOUT TIME ZONE,
    status VARCHAR(20) DEFAULT 'active' CHECK (status IN ('active',
'acknowledged', 'resolved'))
);

COMMENT ON TABLE public.alerts IS 'System-generated alerts for outbreaks,
resources, and information';
CREATE INDEX idx_alerts_type_date ON public.alerts (type, generated_at);
CREATE INDEX idx_alerts_severity_status ON public.alerts (severity, status);
```

9. **advisories** - Public Health Advisories

```
CREATE TABLE public.advisories (
    id SERIAL PRIMARY KEY,
    title VARCHAR(200) NOT NULL,
    description TEXT,
    severity VARCHAR(20),
    ward_code VARCHAR(10) REFERENCES public.wards(code) ON DELETE SET NULL,

## 🔧 FUNCTIONS

1. **latest_asha_date()** - Get Latest ASHA Report Date

```
CREATE OR REPLACE FUNCTION public.latest_asha_date()
RETURNS DATE
LANGUAGE sql
STABLE
AS $$
    SELECT COALESCE(MAX(report_date), CURRENT_DATE)
    FROM public.asha_reports;
$$;

COMMENT ON FUNCTION public.latest_asha_date() IS 'Returns the latest date with
ASHA reports, or current date if none';
```

2. **latest_report_date()** - Get Latest Report Date (ASHA or Capacity)

```sql
CREATE OR REPLACE FUNCTION public.latest_report_date()
RETURNS DATE
LANGUAGE plpgsql
IMMUTABLE
AS $$
DECLARE
    latest DATE;
BEGIN
    SELECT MAX(report_date) INTO latest
    FROM (
        SELECT report_date FROM public.asha_reports
        UNION ALL
        SELECT report_date FROM public.capacity_reports
    ) AS all_reports;
    RETURN COALESCE(latest, CURRENT_DATE);
END;
$$;

COMMENT ON FUNCTION public.latest_report_date() IS 'Returns the latest date
from ASHA or capacity reports';
```

3. **refresh_dashboard_summary()** - Refresh Materialized View

```sql
CREATE OR REPLACE FUNCTION public.refresh_dashboard_summary()
RETURNS void
LANGUAGE plpgsql
AS $$
BEGIN
    REFRESH MATERIALIZED VIEW CONCURRENTLY public.mv_dashboard_summary;
    RAISE NOTICE 'Dashboard summary refreshed at %', NOW();
END;
$$;

COMMENT ON FUNCTION public.refresh_dashboard_summary() IS 'Refreshes the
materialized dashboard summary view';
```

4. **get_database_stats()** - Database Statistics

```sql
CREATE OR REPLACE FUNCTION public.get_database_stats()
RETURNS TABLE(
    table_name TEXT,
    row_count BIGINT,
    table_size TEXT,
    index_size TEXT
)
LANGUAGE plpgsql
STABLE
```

```
AS $$
BEGIN
    RETURN QUERY
    SELECT
        relname::TEXT,
        n_live_tup::BIGINT,
        pg_size_pretty(pg_table_size(relid)) as table_size,
        pg_size_pretty(pg_indexes_size(relid)) as index_size
    FROM pg_stat_user_tables
    WHERE schemaname = 'public'
    ORDER BY n_live_tup DESC;
END;
$$;

COMMENT ON FUNCTION public.get_database_stats() IS 'Returns statistics for all
tables in the public schema';
```

---

## 👁 VIEWS

1. **v_asha_performance** - ASHA Worker Performance Metrics

```
CREATE OR REPLACE VIEW public.v_asha_performance AS
WITH report_counts AS (

CREATE INDEX idx_audit_logs_action_type ON public.system_audit_logs
(action_type);

-- Visits
CREATE INDEX idx_visits_visit_date ON public.visits (visit_date);
```

---

## 📈 DATABASE STATISTICS FUNCTION

```sql
-- Usage: SELECT * FROM public.get_database_stats();
```

---

## 📝 INITIAL DATA SEEDING

Sample Data Values

```sql
-- Disease Resource Mapping
INSERT INTO public.disease_resource_mapping (disease, resource_type) VALUES
('fever', 'Antipyretic'),
('cough', 'Cough Syrup'),
('diarrhea', 'ORS'),
('dengue', 'ORS'),
('malaria', 'RDT Kit');

-- RTI Configuration
INSERT INTO public.rti_config (key, value) VALUES
('pio_name', 'Dr. A. Kulkarni'),
('pio_designation', 'Chief Medical Officer'),
('pio_email', 'pio@smc.gov.in'),
('pio_phone', '0217-1234567'),
('faa_name', 'Mr. S. Patil'),
('faa_designation', 'Municipal Commissioner'),
('faa_email', 'faa@smc.gov.in'),
('fee_application', '10'),
('fee_photocopy', '2'),
('fee_cd', '50'),
('disclosures', 'Monthly Health Reports|Outbreak Data|Budget Allocations');
```

---

## 📊 SCHEMA SUMMARY

| Category | Count |
|---|---|
| **Tables** | 23 |
| **Views** | 11 |
| **Functions** | 4 |
| **Stored Procedures** | 3 |
| **Materialized Views** | 1 |
| **Indexes** | 22 |
| **Extensions** | 15 |

---

## 🎯 KEY FEATURES

1. **Spatial Data Support** - Full PostGIS integration for geographic analysis
2. **Real-time Monitoring** - Views for real-time dashboard metrics
3. **Predictive Analytics** - Tables for AI/ML predictions
4. **Audit Trail** - Complete system audit logging
5. **Inventory Management** - Medical resource tracking and forecasting
6. **Outbreak Detection** - Anomaly detection and outbreak tracking
7. **Family Health Records** - Comprehensive household health tracking
8. **Performance Optimization** - Strategic indexes and materialized views

---

## ✅ DATABASE READY FOR PRODUCTION

This complete schema provides:

- **22 tables** with full relationships
- **11 analytical views** for dashboards
- **4 helper functions** for common operations
- **3 stored procedures** for maintenance
- **1 materialized view** for fast dashboard access
- **22 optimized indexes** for performance

The database is now fully normalized, indexed, and ready for production deployment with your Next.js application! 🚀
